

Wild dynamics and periods for operators on Hilbert spaces

Alfred Peris

Workshop on Functional and Complex Analysis
Universidad de Valladolid
20-23, June, 2022

Since Sharkovsky's characterization in 1964 of possible periods for a continuous map on an interval, the study of periods that certain dynamical systems allow, depending on the structure of the phase space or the map, has attracted a lot of attention. We will present a complete characterization of all possible periods that a Devaney chaotic operator on the Hilbert space can present.

This is a joint work with J.A. Conejero, F. Martínez-Giménez and F. Rodenas.
